# 1 Safety Precautions

## 1.1. General Guidelines

1. For continued safety, no modification of any circuit should be attempted.
2. Disconnect AC Plug before disassembling this unit.
3. It is advisable to use an isolation transformer in the AC supply before servicing.
4. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
5. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers, shield, and isolation R-C combinations etc. are properly installed.
6. After servicing, be sure to restore the wires, leads, insulation barriers, shields, etc.
7. After servicing, make the leakage current checks to prevent the customer from being exposed to shock hazards.

### Caution:

**Use a separate Isolation Transformer for this unit when servicing.**

## 1.2. Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. For physically operated power switches, turn power on. Otherwise skip step 2.
3. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the receiver, such as screwheads, connectors, etc. When the exposed metallic part has a return path to the chassis, the reading should be between 1 M $\Omega$  and 12 M $\Omega$ . When the exposed metal does not have a return path to the chassis, the reading must be infinity.

## 1.3. Leakage Current Hot Check

1. Plug the AC cord directly into the AC outlet.  
Do not use an isolation transformer for this check.
2. Connect "A" to exposed metallic part on the set. And connect "B" to a good earth ground, as shown in Figure 1.
3. Use an AC voltmeter, with 1 k $\Omega$ /V or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.25 V RMS.  
A leakage current tester (Simpson Model 228 equivalent) may be used to make the hot checks. Leakage current must not exceed 1/2 mA. In case a measurement is outside of the limits specified, there is a possibility of shock hazard, and the receiver should be repaired and rechecked before it is returned to the customer.

Figure 1

## 1.4. UV-Precaution

1. Be sure to disconnect the AC Plug when replacing the lamp.
2. Since the lamp reaches a very high temperature during its operation, wait until it has completely cooled off when replacing the Lamp Unit.
3. The lamp emits small amounts of UV-Radiation.  
Avoid direct-eye contact by covering the Lamp and wearing the UV protective glasses.
4. The high pressure lamp involves a risk of explosion.

Figure 2

This product has a High Intensity Discharge (HID) lamp that contains a small amount of mercury. Disposal of these materials may be regulated in your community due to environmental considerations. For disposal or recycling information please contact your local authorities, or the Electronics Industries Alliance: <<http://www.eiae.org>>

## 2 Warning

### 2.1. Prevention of Electro Static Discharge (ESD) to Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by electro static discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an antistatic solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

**CAUTION :**

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device).

## 3 Service Navigation

### 3.1. Introduction

This service manual contains technical information which will allow service personnel's to understand and service this model. Please place orders using the parts list and not the drawing reference numbers.

If the circuit is changed or modified, this information will be followed by supplement service manual to be filed with original service manual.

### 3.2. About Lead Free Solder (PbF)

#### Distinction of PbF PCB:

PCBs (manufactured) using lead free solder will have a PbF printing on the PCB.  
(Please refer to figures.)

Printed case

#### CAUTION:

- Pb free solder has a higher melting point than standard solder;  
Typically the melting point is 50 °F - 70 °F (30 °C - 40 °C) higher.  
Please use a soldering iron with temperature control and adjust it to 700 °F±20 °F (370 °C± 10 °C).  
In case of using high temperature soldering iron, please be carefull not to heat too long.
- Pb free solder will tend to splash when heated too high (about 1100 °F/600 °C).
- All products with the printed circuit board with PbF stamp or printing must be serviced with lead free solder.  
When soldering or unsoldering, completely remove all of the solder from the pins or solder area,  
and be sure to heat the soldering points with the lead free solder until it melts sufficiently.

#### Recommendations

Recommended lead free solder composition is Sn96.5 Ag3.0 Cu0.5.

\* For models PT-52LCX66-K/PT-61LCX66-K/PT-56LCX16-K

**Notes:**

- Make sure the vents are not blocked. (This could cause damage.)
- Indication on the back panel may change without notice.

## 5.2. Replacement of Lamp

### Lamp Replacement - For models PT-52LCX66/PT-56LCX66/PT-61LCX66/PT-52LCX16/PT-56LCX16/PT-61LCX16

#### CAUTION:

Because of the possibility of injury, strictly follow the replacement procedure below.

This product has a High Intensity Discharge (HID) lamp that contains a small amount of mercury. Disposal of these materials may be regulated in your community due to environmental considerations. For disposal or recycling information please contact your local authorities, or the Electronics Industries Alliance: <<http://www.eiae.org>>

#### Lamp replacement procedure

- 1 Turn power off, wait until power indicator stops blinking red, then unplug the power cord from the wall outlet and confirm that the area around the lamp unit has cooled down.

POWER button LAMP indicator  
/POWER indicator

Please wait more than one hour for lamp replacement.

#### [If you need to replace the lamp more urgently]

- The projection display has a forced cooling feature. After the POWER button is turned OFF, and during the first minute of the normal cooling fan operation, press the VOL+ button on the projection display and 0 button on the remote control at same time for more than 5 seconds. The cooling fan operates for about 10 minutes. The LAMP indicator flashes red 5 times every 5 seconds.

#### Note:

Remove Front Cover after Front Door is opened.

- 2 Pull on both ends of the Front Cover ① with your fingertips to remove it.

- 3 (1) Turn the Lamp Cover Lock/Open Knob to the left.  
(2) Pull the Lamp Cover out and down to open it.

- 4 (1) Turn the Lamp Unit Lock/Open Knob to the left.  
(2) Grasp the Lamp Unit Lock/Open Knob and slowly remove the Lamp Unit as shown.

#### CAUTION

- The lamp unit is hot right after use and may cause burns if touched.
- Please allow the lamp unit to cool before handling or replacing it.

- 5 (1) Insert the new Lamp Unit being careful of the insertion direction.  
• Press on the arrow mark to confirm proper insertion.  
(2) Turn the Lamp Unit Lock/Open Knob to the right until it clicks.

- Properly dispose of the old lamp. Please see the operating instructions for the projection display.
- Secure the lamp unit and lamp unit housing door. If they are not secured, a protective circuit will not allow the lamp to turn on.
- At this point, confirm that the lamp unit will not come out by pulling on the Lock/Open Knob.

- 6 (1) Close the Lamp Cover.  
(2) Turn the Lamp Cover Lock/Open Knob to the right.

- 7 Be sure that the Hook on the Front Cover is securely fastened to the unit as shown.

#### After lamp replacement, follow the procedure below

#### Warning:

Perform lamp time reset only when the lamp has been replaced.

#### Lamp time reset procedure

- 1 Be sure the power cord is plugged into a properly grounded wall outlet. Then, press the POWER button on the projection display or the remote control to turn the unit on.
- 2 While pressing the VOL- button on the projection display, hold down the 0 button on the remote control at same time for more than 5 seconds.

- 3 When reset procedure is complete, the following screen will appear.

- This screen may be different from the actual screen.

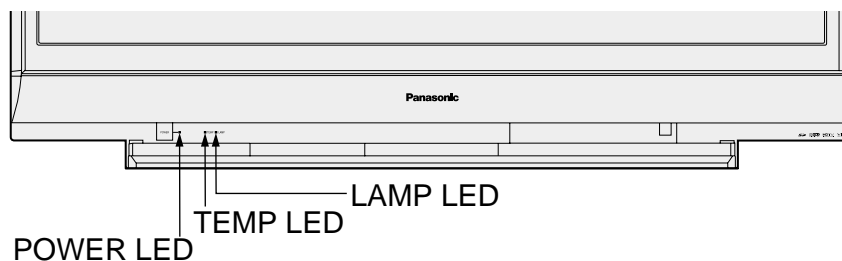

When lamp time reset is finished, the LAMP indicator goes out.

## 6 Service Mode

### LED INDICATIONS FOR ERROR CONDITIONS

Each LED indication facilitates finding the cause of an error.

When an error is detected, the Lamp goes off and the LEDs on the front flash.

(Note 4) (Note 1, 2) (Note 3)

Error No.	Error Information	POWER LED flashes orange	TEMP LED flashes red	LAMP LED flashes red	SOS	LAMP OFF	RESET
1)	SOS2 (Over voltage/current)	<b>1</b>	-	-	H10SOS2	○	Power ON/OFF
2)	Fan 1, Fan 2 or Fan 3 stops	<b>2</b>	-	-	H20FANST	○	AC ON/OFF
3)	Abnormal voltage (DT+5V line)	<b>3</b>	-	-	H30DT9V	○	Power ON/OFF
4)	IC5001 (GC4Pro) communication error	<b>5</b>	-	-	H50GC4PR	○	AC ON/OFF
5)	Temperature Sensor shorted or open (Thermistor 2 P.C.B.)	-	<b>2</b>	-	-	○	Power ON/OFF
6)	Abnormal temperature (Thermistor 2 P.C.B.)	-	<b>3</b>	-	-	○	
7)	Clogged Air Filter	-	<b>6</b>	-	-	○	Clean Air Filter
8)	Abnormal Lamp	-	-	<b>1</b>	-	○	Power ON/OFF
9)	Iris Mechanism hardware error	-	-	<b>2</b>	-	-	
10)	Iris calibration error	-	-	<b>3</b>	-	-	
11)	Lamp Cover open	<b>7</b>	-	-	(H70LAMCV)	○	
12)	Abnormal voltage (+17V, +9V, +5V line) for LCD Drive P.C.B.	<b>8</b>	-	-	(H80LCDDV)	○	

#### Note:

- The detected SOS Error 1) 2) 3) 4) 11) 12) data will be stored in the EEPROM.
- SOS (Error) information is displayed in Service Mode (4/4).
- LAMP OFF: The LED will flash immediately after the Lamp goes off.
- In case of Error 9) or 10), the unit will not shut off and Dynamic Iris setting in Adv. adjust of Picture Menu will be changed to "OFF" automatically. When the unit is turned off and turned back on, Dynamic Iris "OFF" setting remains. Lamp LED will not flash as long as Dynamic Iris setting in Adv. adjust of Picture Menu is set to "ON" manually.

# MAIN PARTS LOCATION

## <Front View>

## <Rear View>

**Note:** There is not the Thermistor 1 P.C.B. in this unit.

TV Unit & Digital Tuner P.C.B.

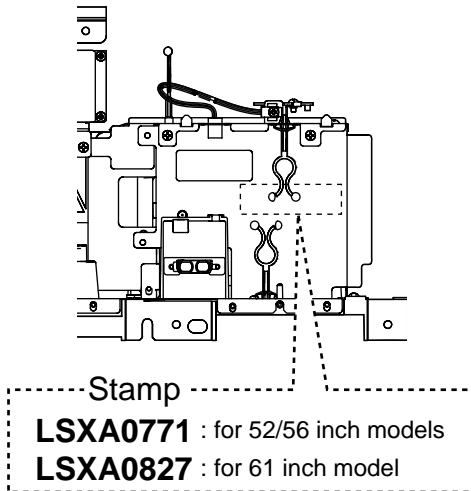

Rear Cover

## TO DISTINGUISH THE PROJECTION UNIT

The only difference between the 52/56 inch model and 61 inch model of the Projection Unit is the LCD Drive P.C.B. Therefore, see the stamp on the Lamp Wall to differentiate. Also, the Focus Adjustment should be performed to match each size of model after replacing the new Projection Unit or the new Base Body Unit.

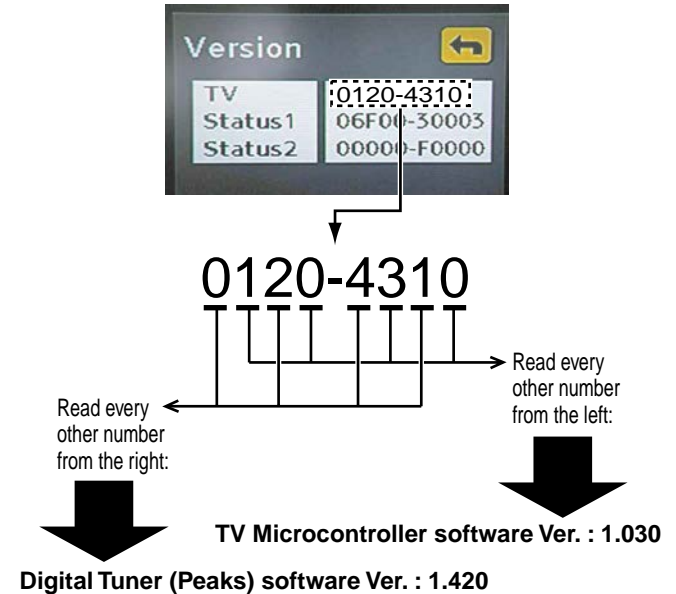

### Note:

The Base Body Unit includes the Projection Unit.

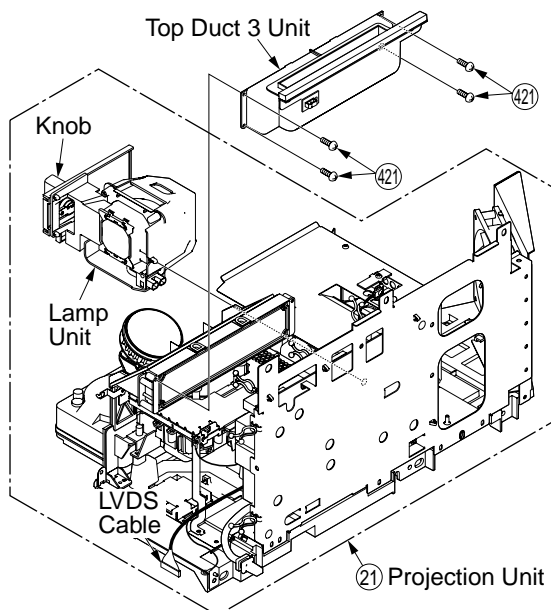

## TO READ THE DIGITAL TUNER (PEAKS) SOFTWARE VERSION AND TV MICROCONTROLLER SOFTWARE VERSION

1. Press MENU key with the power on.
2. Press CH UP/DOWN key and select "Setup." Then press OK key.
3. Press CH UP/DOWN key and select "About." Then press OK key.
4. Select "Version" and press OK key. Version menu will appear as shown below. Starting with the second digit from the right or from the left.

## BEFORE REMOVING THE PROJECTION UNIT FROM THE UNIT AT THE USER'S LOCATION

When removing the Projection Unit, remove the Lamp Unit and the Top Duct 3 Unit from the Projection Unit and keep them. Then, reinstall this Lamp Unit and the Top Duct 3 Unit into the new Projection Unit.

## RESET USER'S MEMORY FUNCTIONS

Be sure to reset the user's memory:

- After replacing the Digital Tuner P.C.B.
  - If the secret code for V-chip has been forgotten.
  - When moving the unit to a new location.
  - When resetting SOS (Error) number records.
1. Turn on the power.
  2. Press and hold the VOLUME DOWN button on the unit and the OK key on the remote for more than 3 seconds. When reset is finished, power shuts off automatically (the user's memory is reset).

## CLOGGED AIR FILTER DETECTION

When a dirty or clogged air filter is detected, the OSD display appears for 1 minute. And then the Lamp is turned OFF. When this OSD display appears, remove the Projection Unit from rear, and clean the air filters gently on the Projection Unit.

**AIR FILTER CLEANING  
IS RECOMMENDED AT THIS  
TIME. FIRST TURN THE  
UNIT OFF.  
PLEASE CALL FOR  
SERVICE.**

**UNIT WILL BE TURNED  
OFF AFTER 1 MINUTE.**

## DO NOT UNPLUG AC CORD DURING COOLING OPERATION

The lamp cooling fan will continue to operate for approximately 1 minute after the power is turned off.

At the same time, the POWER LED will flash red.

Do not disconnect the AC Cord from the power outlet and do not open any circuit breakers while the cooling fan is still operating.

## HOT CIRCUIT

Primary circuit exists on the Power P.C.B.

This circuit is identified as "HOT" on the P.C.B. and in the Service Manual. Use extreme care to prevent accidental shock when servicing.

## MODEL NO. IDENTIFICATION MARK

Use Marks shown in the chart below to distinguish the different models included in this Service Manual.

MODEL	MARK
PT-52LCX66	A
PT-56LCX66	B
PT-61LCX66	C
PT-52LCX16	D
PT-56LCX16	E
NOT USED	PT

### Note:

Refer to Item 3 of Schematic Diagram Notes of Schematic Diagram and Circuit Board Layout Notes, for mark "PT."

## BEFORE REMOVING THE MAIN P.C.B. OR THE TV UNIT FROM THE UNIT AT THE USE'S LOCATION

**Note:**

The TV Unit includes the Main P.C.B.

**CAUTION:**

1. **Be sure to make a note of the CURRENT LAMP value (value A) in Service Mode (1/4):**

```
SERVICE Mode 1 / 4
LAMP OPERATION TIME
CURRENT LAMP : 2000h ←Value A
OSD DISP : ON (Changeable)
LON COUNT : 153
BKSV : 4B 7E 3D CA FB
```

<Service Mode (1/4)>  
Fig. 2

LAMP OPERATION TIME is stored in EEPROM on the Main P.C.B. Therefore, before removing the Main P.C.B. or the TV Unit at the user's location, make a note of the CURRENT LAMP value (value A) in Service Mode (1/4). Then, after installing the new Main P.C.B. or the TV Unit at the user's location, set the CURRENT LAMP value to the original value (value A) in Service Mode. Otherwise, OSD and LED Lamp replacement indications will be displayed at the wrong time.

**Note:**

In case it is impossible to make a note of the CURRENT LAMP value because of a defective Main P.C.B., ask the customer their daily average use and the approximate age of the current Lamp. Then, calculate the CURRENT LAMP value as follows and make a note.

$$\boxed{\text{Daily average use (hours)}} \times \boxed{\text{Approx. age (days)}} = \boxed{\text{CURRENT LAMP (hours)}}$$

**Note:**

The TOTAL value can be set to the original value in Service Mode (2/4) by similar method: Before removing the Main P.C.B. at the user's location, make a note of the TOTAL value in Service Mode (2/4). Then, after installing the new Main P.C.B. at the user's location, set the TOTAL value to the original value in Service Mode.

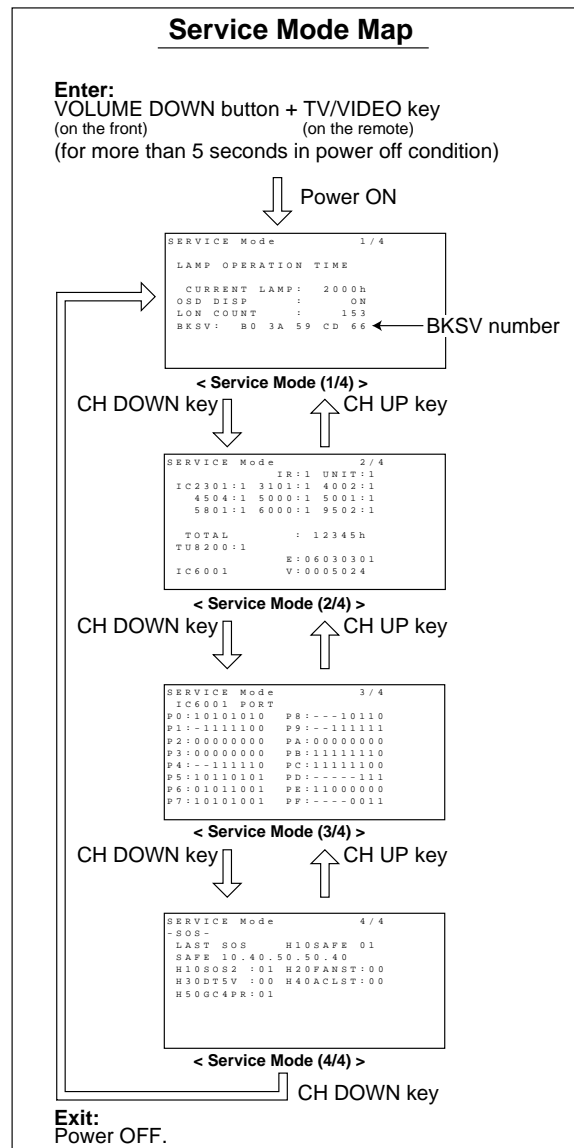

## WHEN REINSTALLING THE MAIN P.C.B. OR THE TV UNIT FROM THE UNIT AT THE USE'S LOCATION

**CAUTION:**

1. Set CURRENT LAMP value to original value as follows.
  - 1) Select CURRENT LAMP in Service Mode (1/4).
  - 2) Press the VOLUME UP/DOWN key on the remote to change to the original value (value A) that was noted before removing the Main P.C.B. or the TV Unit at the user's location.

```
SERVICE Mode 1 / 4
LAMP OPERATION TIME
CURRENT LAMP : 2000h ←Value A
OSD DISP : ON (Changeable)
LON COUNT : 153
BKSV : 48 BF 9D 72 B5
```

<Service Mode (1/4)>  
Fig. 3

## WIRE AND LEAD POSITION DIAGRAM OF THE UNIT

After servicing, make sure that all wires, leads, and clampers are placed in their original position. It is important for the best operation of the unit.

**Note:** Use extreme care especially for the following.

Fig. 9-1

After servicing, make sure that all wires, leads, and clampers are placed in their original position. It is important for the best operation of the unit.

**Note:** Use extreme care especially for the following.

Fig. 9-2

After servicing, make sure that all wires, leads, and clampers are placed in their original position. It is important for the best operation of the unit.

**Note:** Use extreme care especially for the following.

Fig. 9-3

After servicing, make sure that all wires, leads, and clampers are placed in their original position. It is important for the best operation of the unit.

**Note:** Use extreme care especially for the following.

Fig. 9-4

After servicing, make sure that all wires, leads, and clampers are placed in their original position. It is important for the best operation of the unit.

**Note:** Use extreme care especially for the following.

Fig. 9-5

# 7 Troubleshooting Guide

## 7.1. Troubleshooting Hints for Block Level Repair

### MAIN PARTS LOCATION

<Front View>

<Rear View>

**Note:** There is not the Thermistor 1 P.C.B. in this unit.

TV Unit & Digital Tuner P.C.B.

## LED INDICATIONS FOR ERROR CONDITIONS

Each LED indication facilitates finding the cause of an error.

When an error is detected, the Lamp goes off and the LEDs on the front flash.

(Note 4) (Note 1, 2) (Note 3)

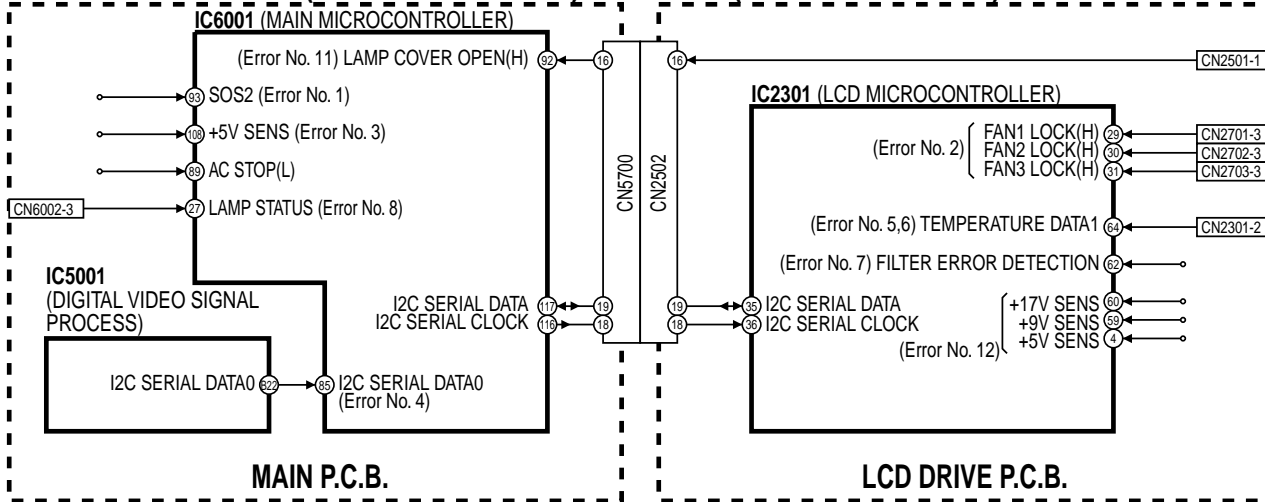

Error No.	Error Information	POWER LED flashes orange	TEMP LED flashes red	LAMP LED flashes red	SOS	LAMP OFF	RESET
1)	SOS2 (Over voltage/current)	<b>1</b>	-	-	H10SOS2	○	Power ON/OFF
2)	Fan 1, Fan 2 or Fan 3 stops	<b>2</b>	-	-	H20FANST	○	AC ON/OFF
3)	Abnormal voltage (DT+5V line)	<b>3</b>	-	-	H30DT9V	○	Power ON/OFF
4)	IC5001 (GC4Pro) communication error	<b>5</b>	-	-	H50GC4PR	○	AC ON/OFF
5)	Temperature Sensor shorted or open (Thermistor 2 P.C.B.)	-	<b>2</b>	-	-	○	Power ON/OFF
6)	Abnormal temperature (Thermistor 2 P.C.B.)	-	<b>3</b>	-	-	○	
7)	Clogged Air Filter	-	<b>6</b>	-	-	○	Clean Air Filter
8)	Abnormal Lamp	-	-	<b>1</b>	-	○	
9)	Iris Mechanism hardware error	-	-	<b>2</b>	-	-	
10)	Iris calibration error	-	-	<b>3</b>	-	-	Power ON/OFF
11)	Lamp Cover open	<b>7</b>	-	-	(H70LAMCV)	○	
12)	Abnormal voltage (+17V, +9V, +5V line) for LCD Drive P.C.B.	<b>8</b>	-	-	(H80LCDDV)	○	

### Note:

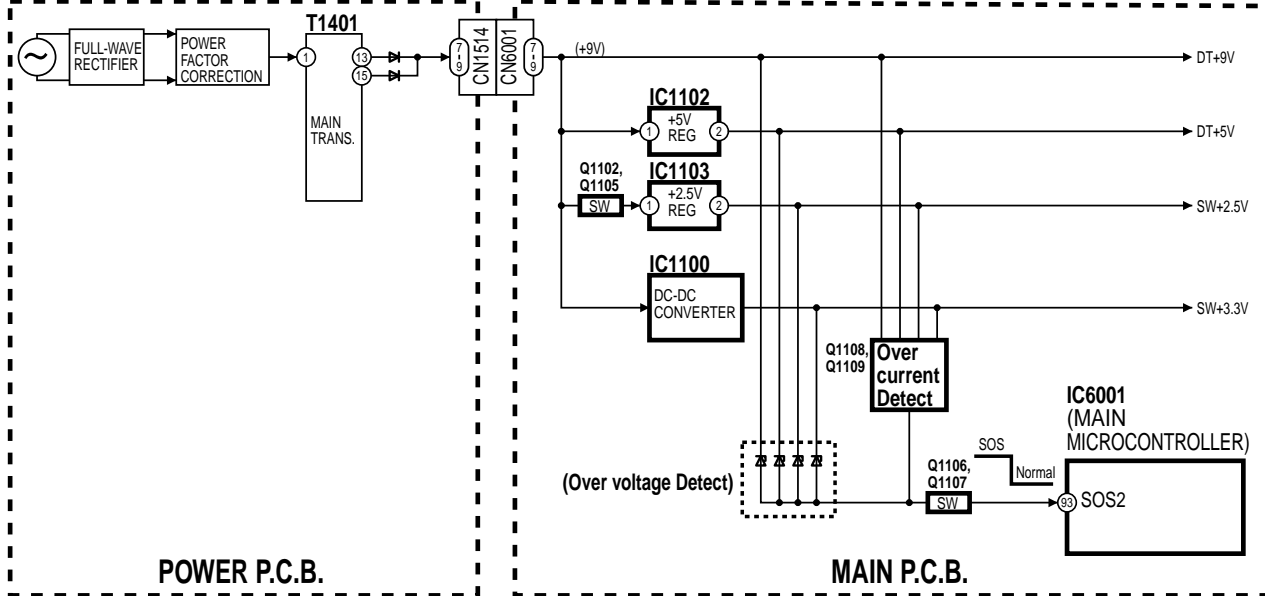

- The detected SOS Error 1) 2) 3) 4) 11) 12) data will be stored in the EEPROM.
- SOS (Error) information is displayed in Service Mode (4/4).
- LAMP OFF: The LED will flash immediately after the Lamp goes off.
- In case of Error 9) or 10), the unit will not shut off and Dynamic Iris setting in Adv. adjust of Picture Menu will be changed to "OFF" automatically. When the unit is turned off and turned back on, Dynamic Iris "OFF" setting remains. Lamp LED will not flash as long as Dynamic Iris setting in Adv. adjust of Picture Menu is set to "ON" manually.

## Protection Circuit

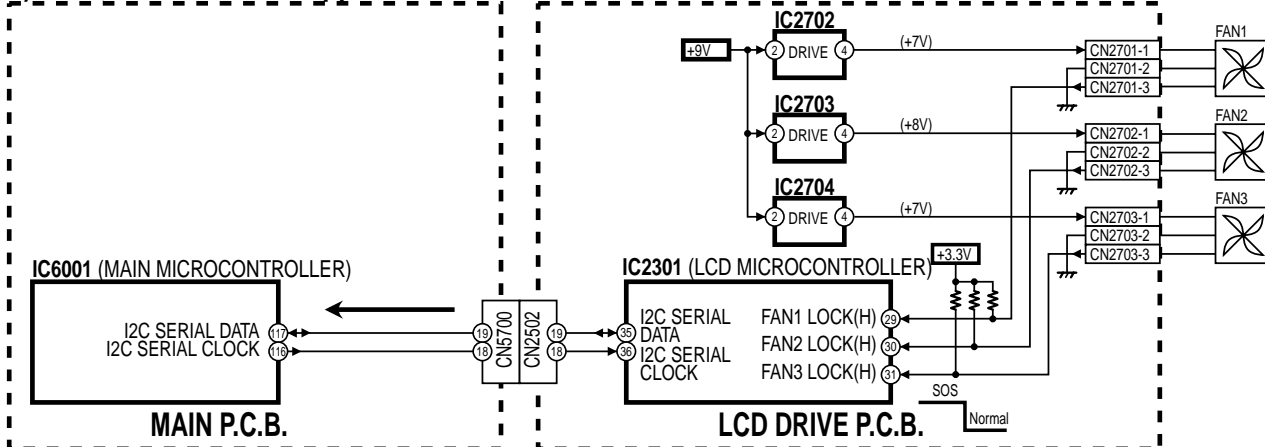

### SOS terminal of IC6001 (Main microcontroller) and IC2301 (LCD Microcontroller)

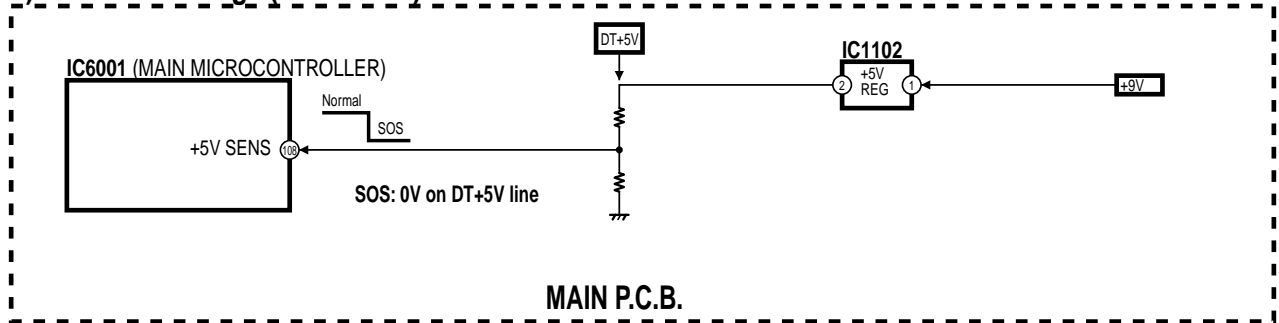

### 1) SOS2 (over voltage/current detect) detection circuit

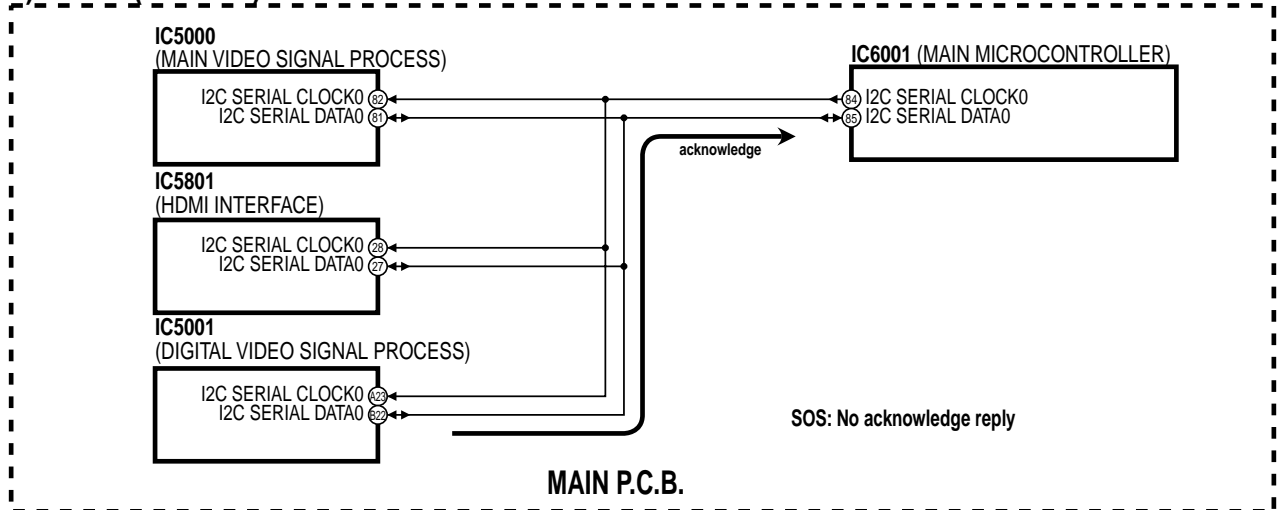

### 2) Fan1, Fan2 or Fan3 stopped detection circuit

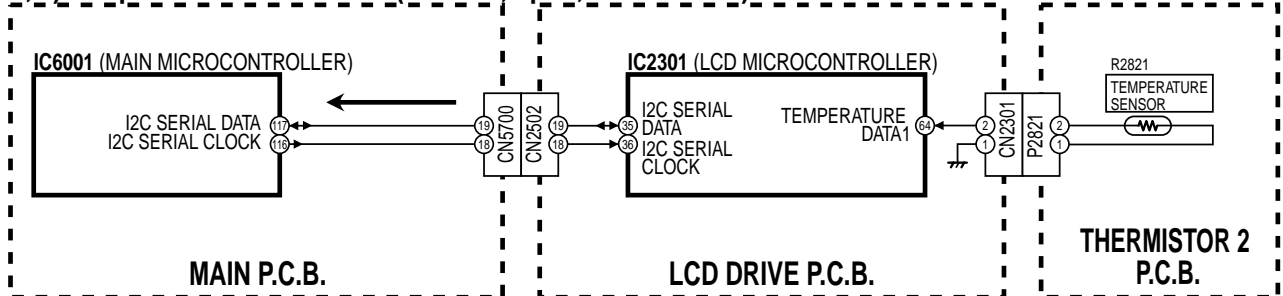

### 3) Abnormal voltage (DT+5V line) detection circuit

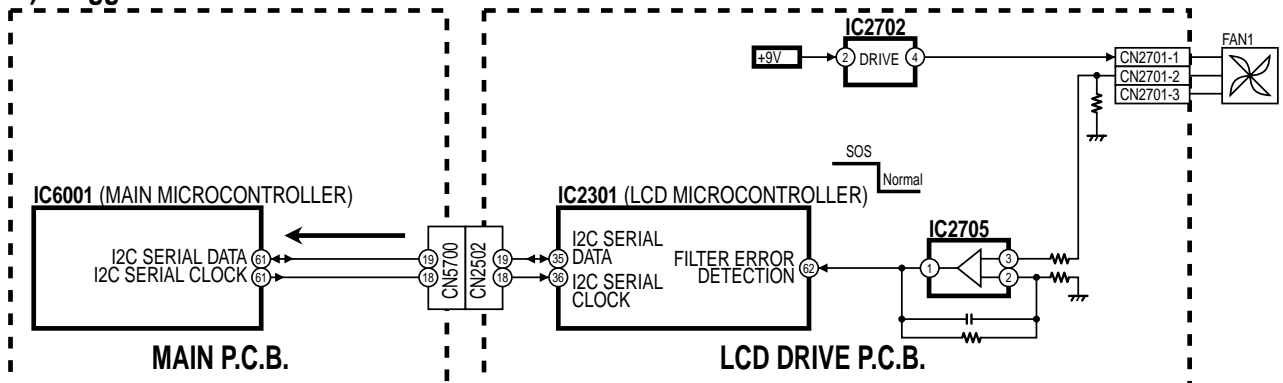

### 4) IC5001 (GC4PRO) communication error detection circuit

### 5, 6) Temperature Sensor error (shorted, open, or abnormal) detection circuit

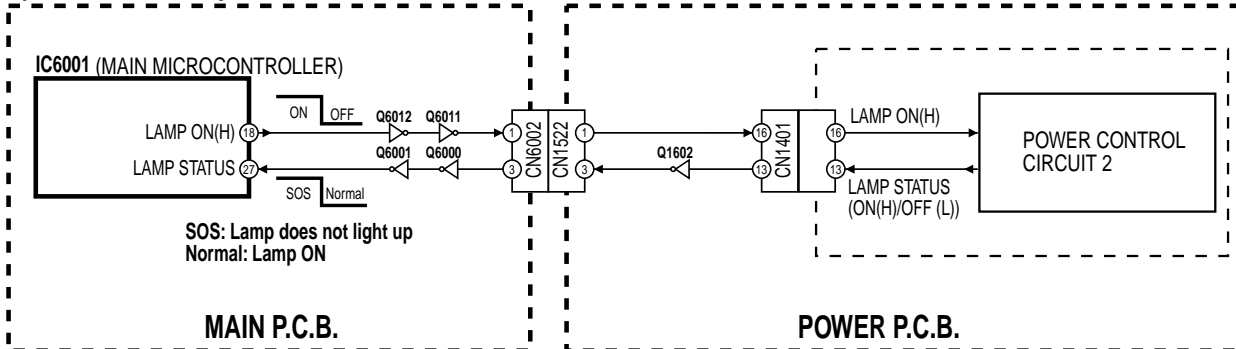

### 7) Clogged air filter detection circuit

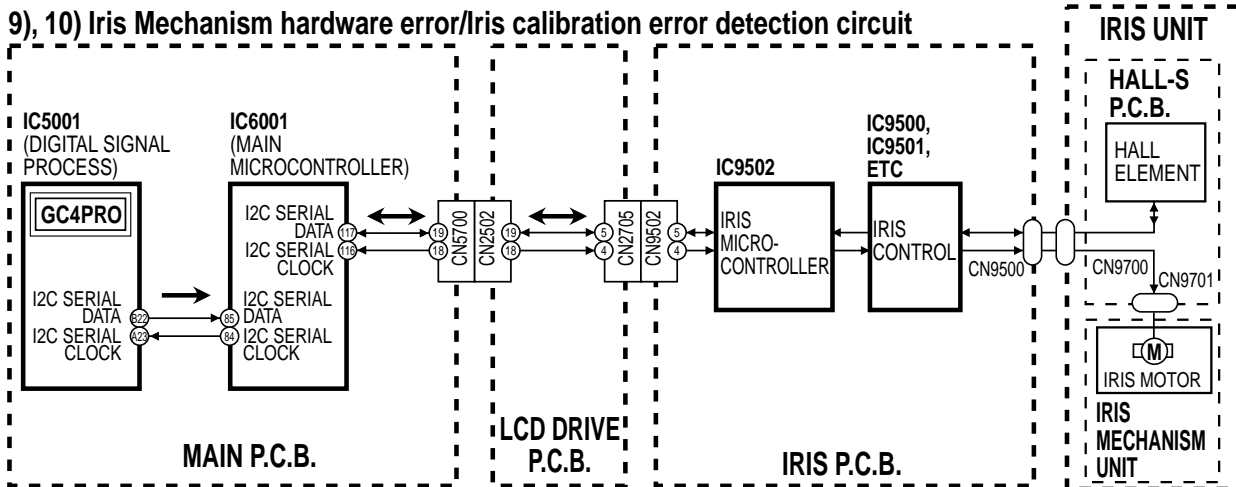

### 8) Abnormal Lamp detection circuit

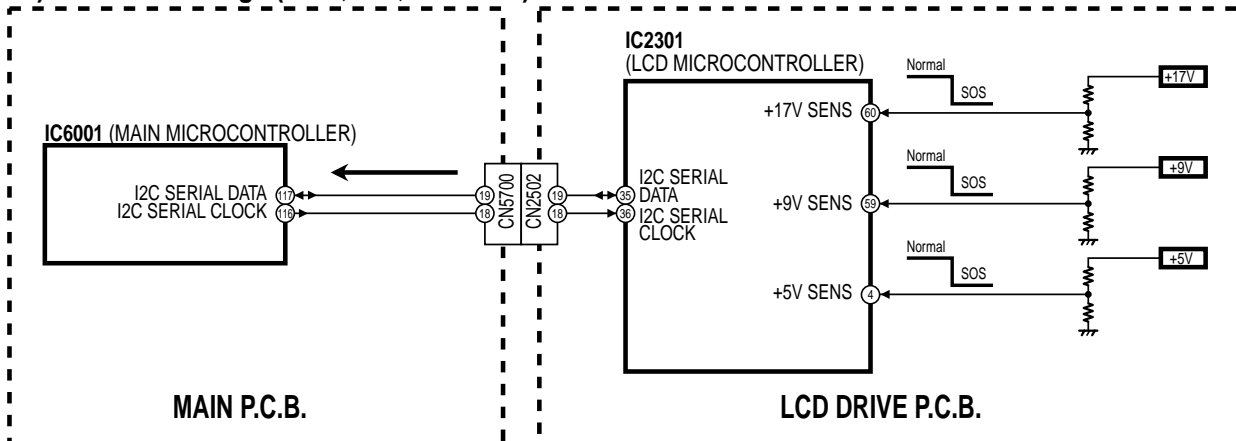

### 9), 10) Iris Mechanism hardware error/Iris calibration error detection circuit

### 11) Lamp cover open detection circuit

### 12) Abnormal voltage (+17V, +9V, +5V lines) detection circuit

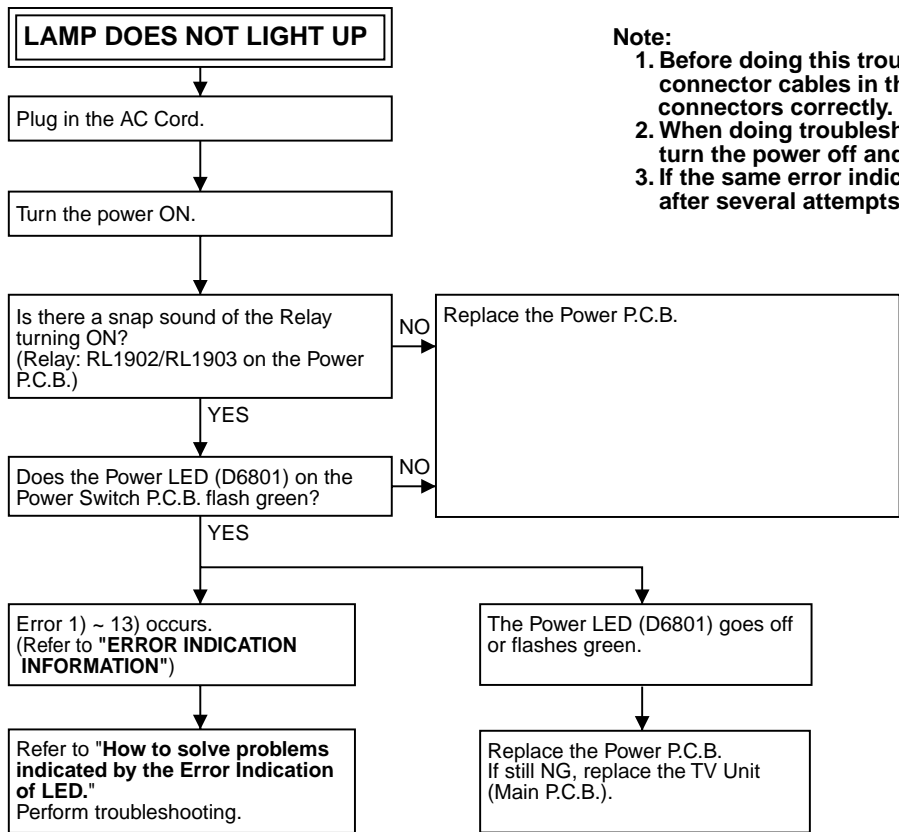

## How to solve problems indicated by the Error Indication of LED

(The symptom of all errors is that Lamp goes off or Lamp does not light up)

**Note: Before performing the troubleshooting, confirm that all connector cables in the unit are connected correctly.**

Error No.	Problem	Possible Solution
1)	Following voltage lines on the Main P.C.B. is over voltage or over current. <ul style="list-style-type: none"> <li>DT+9V line</li> <li>DT+5V line</li> <li>SW+3.3V line</li> <li>SW+2.5V line</li> </ul>	Replace the TV Unit (Main P.C.B).
2)	Cooling Fan (Fan 1, Fan 2 and/or Fan 3) malfunction.	<div style="border: 1px solid black; padding: 5px; display: inline-block;"> <p>Are Fan 1, Fan 2 and Fan 3 operating for a moment just after the power is turned on?</p> </div> <ul style="list-style-type: none"> <li>All Fans stop. → Replace the LCD Drive P.C.B. or Power P.C.B.</li> <li>Only Fan 1 stops. → Replace the Projection Unit (LCD Drive P.C.B.).</li> <li>Only Fan 2 stops. → Replace the Projection Unit (LCD Drive P.C.B.).</li> <li>Only Fan 3 stops. → Replace the Fan3. If still NG, replace the Projection Unit (LCD Drive P.C.B.).</li> </ul>
3)	DT+5V line on the Main P.C.B. error.	<ol style="list-style-type: none"> <li>1. Replace the TV Unit (Main P.C.B.)</li> <li>2. If still NG, replace the Digital Tuner P.C.B.</li> <li>3. If still NG, replace the Power P.C.B.</li> </ol>
4)	Communication error I2C SERIAL DATA for between IC6001 (Pin 85) and IC5001 (Pin B22) on the Main P.C.B.	Replace the TV Unit (Main P.C.B.).
5)	The temperature sensor (R2821) on the Thermistor 2 P.C.B. on the Lamp Top Panel is short or open.	<ol style="list-style-type: none"> <li>1. Remove CN2301 connector on the LCD Drive P.C.B. and check if the resistance between pin1 and pin2 of P2821 on the Thermistor 2 P.C.B. is <math>5\text{ k}\Omega \sim 1\text{ M}\Omega</math>.</li> <li>2. If still NG, replace the Temperature Sensor (R2821) on the Thermistor 2 P.C.B.</li> <li>3. If still NG, replace the Projection Unit (LCD Drive P.C.B.).</li> <li>4. If still NG, replace the TV Unit (Main P.C.B.).</li> </ol>
6)	It indicates when the temperature detected by the Temperature Sensor (R2821) on Thermistor 2 P.C.B. exceeds 105 °C (221 °F). <ol style="list-style-type: none"> <li>1. The surrounding temperature of the place of use may be too high.</li> <li>2. The vents on the rear may be blocked.</li> </ol>	<ol style="list-style-type: none"> <li>1. Relocate the unit to a proper location. <ul style="list-style-type: none"> <li>• Do not place in direct sunlight and other sources of direct heat.</li> <li>• Do not place the unit in humid or dusty location, or areas exposed to smoke or steam. (surrounding temperature should be between 0 °C (32 °F) and 35 °C (95 °F) and humidity should be between 20 % and 80 % (with no condensation).)</li> <li>• The vents are not blocked. It is recommended that a gap of at least 10 cm is left all around the unit even when it is placed inside a cabinet or between shelves.</li> </ul> </li> <li>2. Check if the fans are operating properly.</li> </ol>
7)	Clogged Air Filter of the Fan Case Unit.	<ol style="list-style-type: none"> <li>1. Clean the Air Filters on the Projection Unit.</li> <li>2. If still NG, replace the Projection Unit.</li> <li>3. If still NG, replace the TV Unit (Main P.C.B.).</li> </ol>
8)	The Lamp is defective (short of the Lamp).	<ol style="list-style-type: none"> <li>1. Wait until the Lamp is cooled off and try to turn the power back on. If same error LED indication continues, remove the Lamp and visually inspect it. If it is cracked, it must be replaced. If the Lamp is OK, replace the Power P.C.B.</li> </ol>
9)	When the Iris Mechanism fails to reach the objective angle of +/- 2° in two consecutive seconds.	Replace the Projection Unit.
10)	When power is turned on, the Iris Mechanism performs calibration to incorporate variations detected by the Hall Sensor. A maximum current (+) and (-) is supplied to the Motor and the Mechanism moves to the full-open/ full-close position. An error occurs when this angle is measured by the Hall Sensor and full-open/ full-close is not reached, or when the angle difference is outside the controllable range.	Replace the Projection Unit.
11)	Mis-installed Lamp Cover (the Lamp cover is open).	<ol style="list-style-type: none"> <li>1. Install the Lamp Cover Unit properly.</li> <li>2. If still NG, check and replace the Cover Switch P.C.B.</li> <li>3. If still NG, replace the TV Unit (Main P.C.B.).</li> </ol>
12)	<ol style="list-style-type: none"> <li>1. +17V line on the LCD Drive P.C.B. error.</li> <li>2. +9V line on the LCD Drive P.C.B. error.</li> <li>3. +5V line on the LCD Drive P.C.B. error.</li> </ol>	<ol style="list-style-type: none"> <li>1. Replace the Projection Unit (LCD Drive P.C.B.).</li> <li>2. If still NG, replace the TV Unit (Main P.C.B.).</li> </ol>

**Note:**

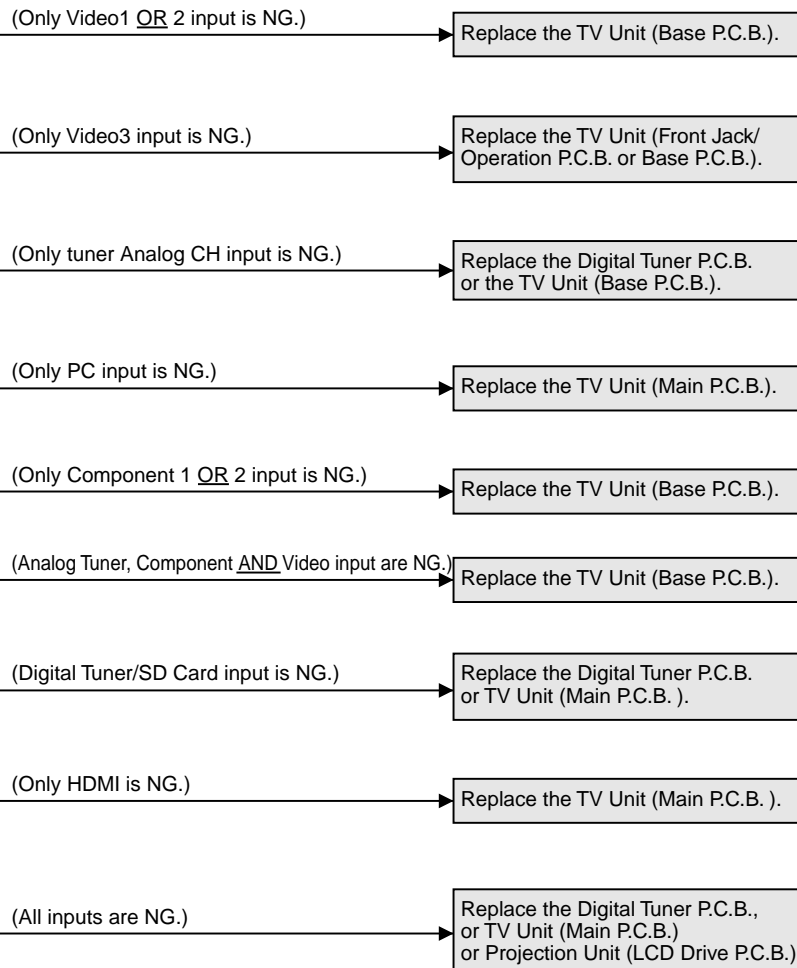

1. Before doing this troubleshooting, confirm that all connector cables in the unit are connected to the connectors correctly.
2. When doing troubleshooting over again, be sure to turn the power off and unplug the AC Cord.
3. If the same error indication occurs repeatedly, after several attempts, proceed to the next step.

## HOW TO DETERMINE WHICH P.C.B. IS DEFECTIVE

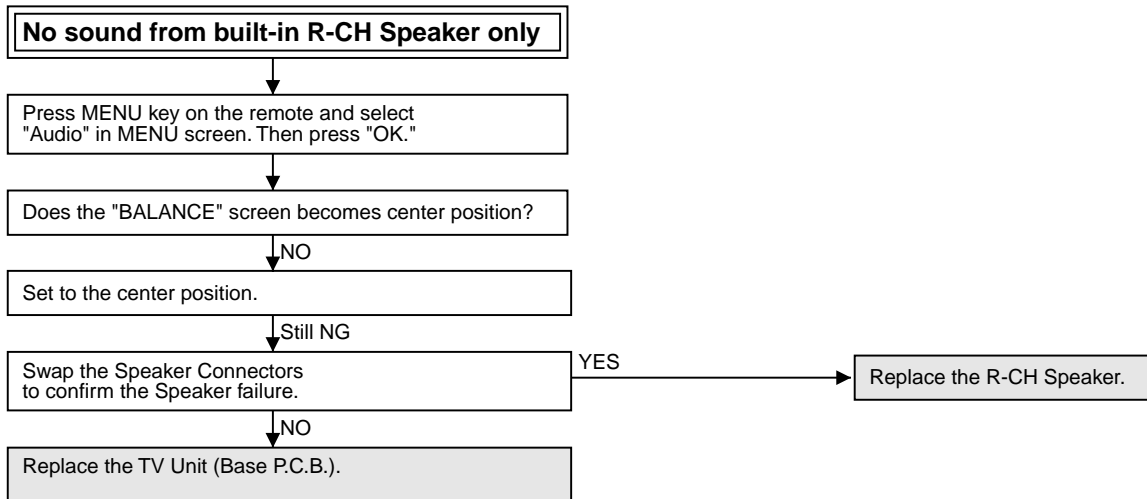

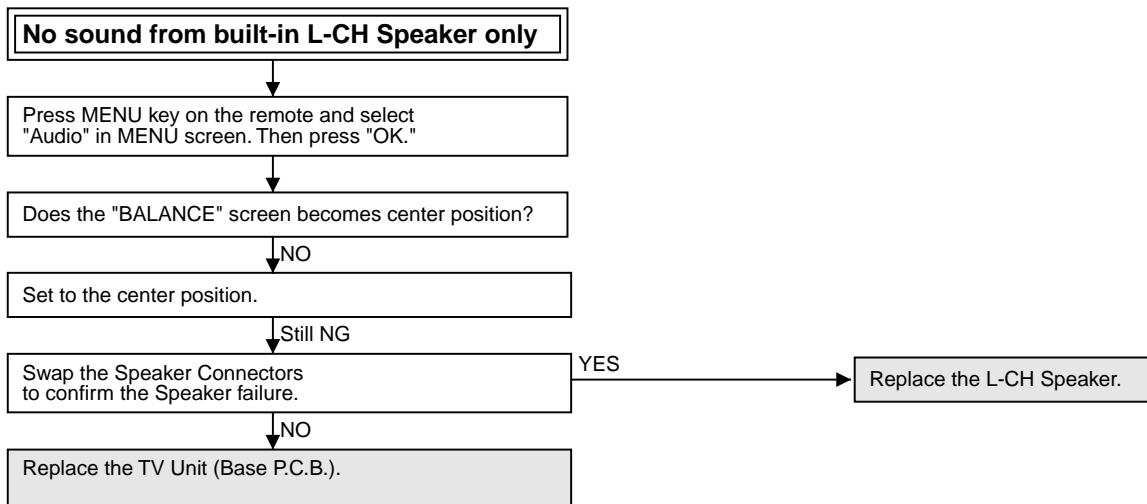

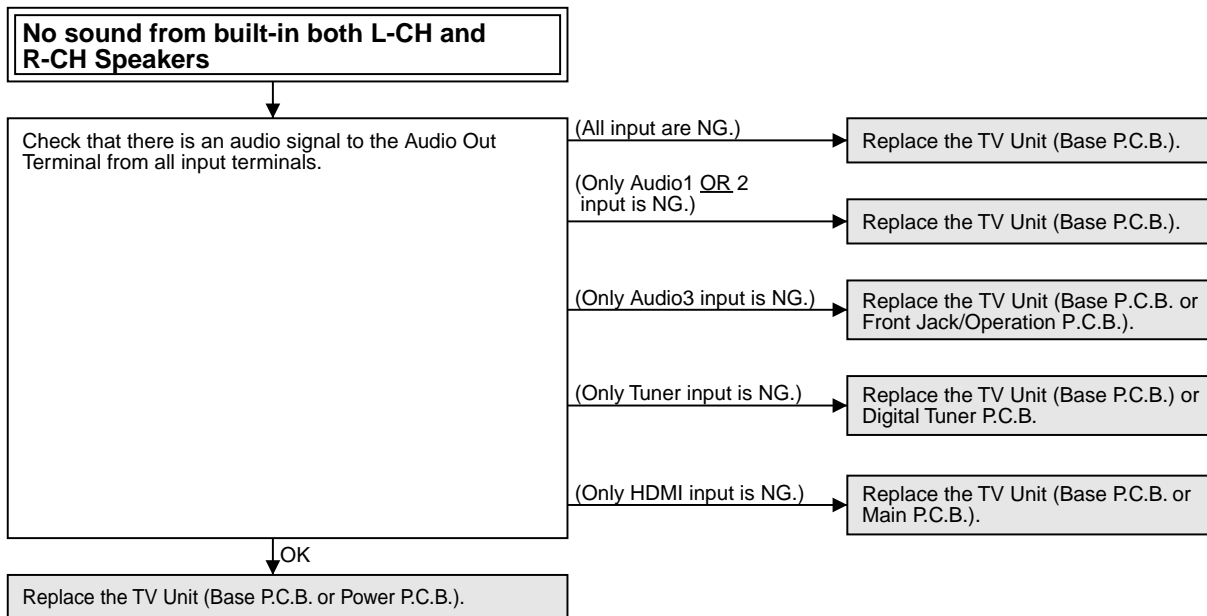

No picture or abnormal picture

### ABNORMAL PICTURE:

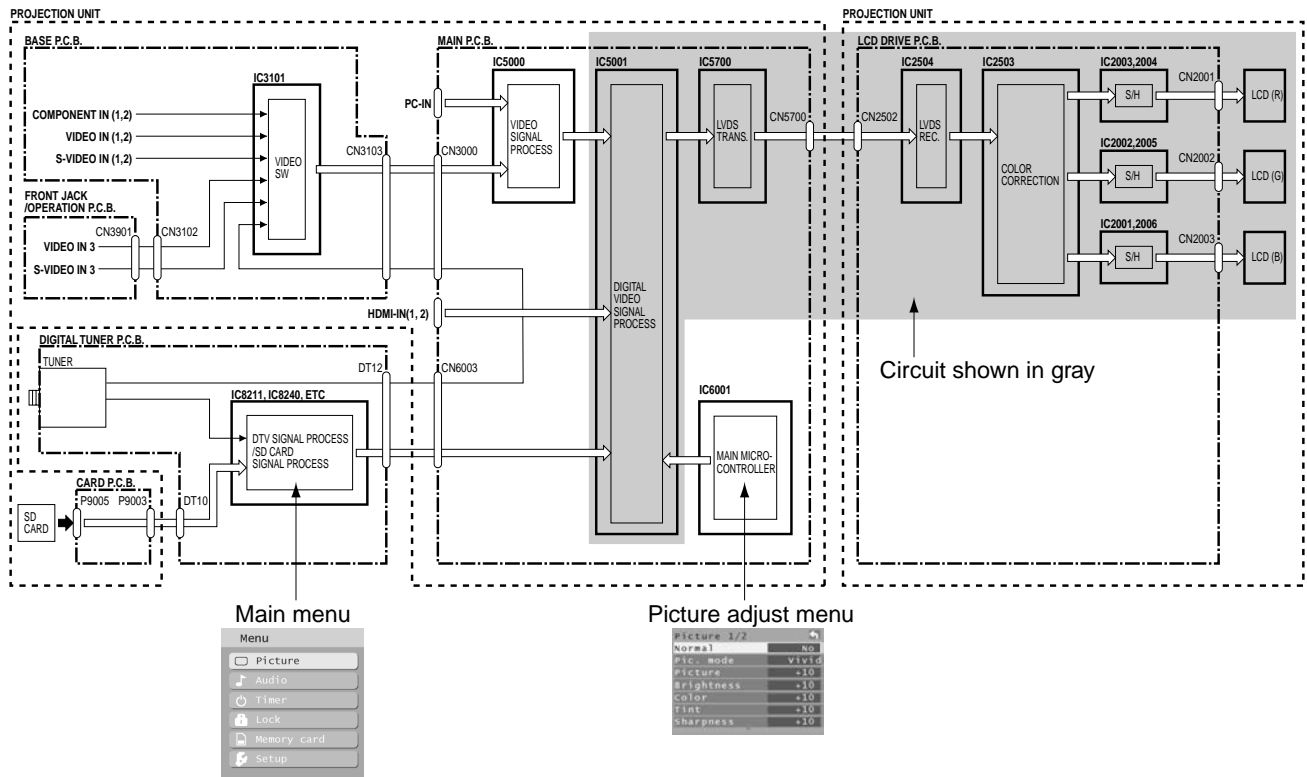

- No Picture Color (Black and White picture)
- Abnormal Picture Color
- Unsynchronized Picture
- Dark Picture

In the case that one or some inputs are NG, it can be judged that the Optical Block Unit is OK.

## Tips for determining defective circuit in the case of picture problem

- 1) Input the signal and display it.  
[Input picture is not displayed normally.]
- 2) Press MENU key to display the Main menu.

- 3) Press OK key to select Picture adjust menu.

- 4) If the Picture adjust menu is displayed normally, the circuit shown in gray is judged OK.  
If the Picture adjust menu is not displayed normally, something is wrong with the circuit shown in gray.  
(Most possibly: Projection Unit)

## 8 Disassembly and Assembly Instructions

### 8.1. Cabinet Section

#### DISASSEMBLY METHOD OF CABINET SECTION

Cabinet section contains following removal procedures:

REMOVAL OF THE TV UNIT AND THE DIGITAL TUNER P.C.B. FROM THE CABINET

REMOVAL OF THE PROJECTION UNIT

REMOVAL OF THE BASE BODY UNIT

REMOVAL OF THE POWER P.C.B. FROM THE CABINET

REMOVAL OF THE FRONT JACK/OPERATION P.C.B., THE SD CARD P.C.B., THE MAIN P.C.B., THE BASE P.C.B. FROM THE TV UNIT

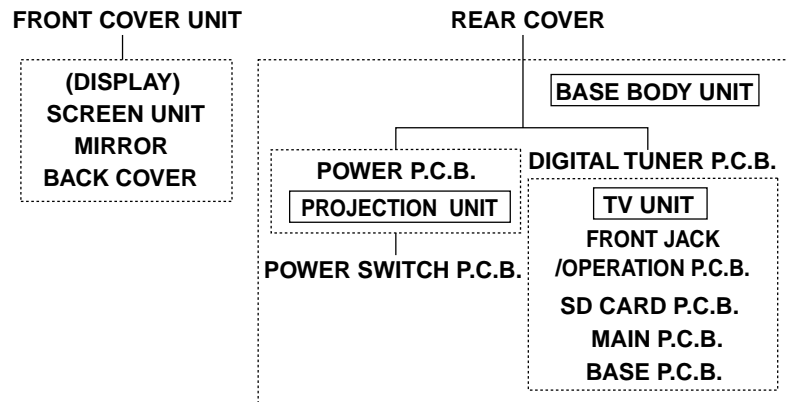

REMOVAL OF THE SCREEN UNIT FROM THE DISPLAY

REMOVAL OF THE MIRROR FROM THE BACK COVER

REMOVAL OF THE POWER SWITCH P.C.B. FROM THE CABINET

#### DISASSEMBLY FLOWCHART

This flow chart indicates the disassembly steps of the cabinet parts and the P.C.Boards in order to gain access to item (s) to be serviced. When reassembling, perform the step (s) in the reverse order. Bend, route and dress the wires as they were originally.

#### Note :

- Place a cloth or some other soft material under the P.C. Boards or Unit to prevent damage.
- When reinstalling, ensure that the connectors are connected firmly and electrical components have not been damaged.
- Do not supply power to the unit during disassembly and reassembly.

## REMOVAL OF THE TV UNIT AND THE DIGITAL TUNER P.C.B. FROM THE CABINET

1. Remove the Rear Cover Unit by removing the 13 Screws (401) then pinching the 3 latch tabs.

Fig. D1-1

2. Remove the Connecting Plate R by removing the 2 Screws (401, 402).
3. 1) Remove the 2 Screws (402) on the Connecting Plate F, and remove the Screw (401) on the left side of the TV Unit.  
 2) Disconnect Connectors CN4501, CN6000, CN6001, CN6002, CN6008 and the 2 Speaker Connectors and release from the clampers.  
 3) To access the GND Wire of the LVDS Cable, slide the TV Unit with the Digital Tuner P.C.B. along the Guide Tabs.  
 4) Remove the Screw (402) on GND Wire of LVDS Cable, and disconnect the LVDS Cable from Connector CN5700.  
**Note:** refer to next page.  
 5) Remove the TV Unit with the Digital Tuner P.C.B.

Fig. D1-2

**Note:**

Grasping the center of both sides of the sheet or cable with your fingers, slowly and steadily pull the LVDS Cable straight out from the connector. Do not joggle the LVDS cable while disconnecting. Reconnecting is done in the same manner.

4. 1) Disconnect Connector DT10.  
2) Remove the Digital Tuner P.C.B. by removing the 6 Screws (402, 480). (BtoB Connector DT12 is disconnected.)

**Note:**

If the Digital Tuner P.C.B. is difficult to remove, remove the Rear Jack Holder by removing the 6 (or 7: PT-52/56LCX16, PT-52/61LCX66-K, PT-56LCX15-K) Screws (402, 452) and releasing the Locking Tab.

Fig. D1-3

## REMOVAL OF THE PROJECTION UNIT

1. Remove the TV Unit with the Digital Tuner P.C.B. Refer to Steps 1 ~ 2 in "REMOVAL OF THE TV UNIT AND THE DIGITAL TUNER P.C.B. FROM THE CABINET."
2. 1) Remove the 2 Screws (402) on the Connecting Plate F.  
 2) Remove the 4 Screws (401) on the Projection Unit.  
 3) Slide the Projection Unit along the Groove.

Fig. D2-1

3. 1) Remove the Top Duct 3 Unit by removing the 4 Screws (421).

**CAUTION:**

When removing the Screws (421) on the Top Duct 3 Unit, plastic dust may be produced. Therefore, confirm that there is no dust on the Top Duct 3 Unit. If there is dust, clean the Top Duct 3 Unit with a brush, etc. Otherwise, dust may adhere to the inside of the screen.

- 2) Remove the Lamp Unit by turning the Knob.

Fig. D2-2

**Replacement Note of Projection Unit:**

1. After replacing the Projection Unit, be sure to perform "ADJUSTMENT of Projection Unit." Refer to "WHEN INSTALLING THE PROJECTION UNIT OR THE BASE BODY UNIT INTO THE UNIT AT THE USER'S LOCATION:."
2. These parts will be necessary when replacing. Set aside, keep, and re-use.
  - Top Duct 3 Unit
  - Lamp Unit

## REMOVAL OF THE BASE BODY UNIT

1. Remove the Rear Cover Unit. Refer to Step 1 in "REMOVAL OF THE TV UNIT AND THE DIGITAL TUNER P.C.B. FROM THE CABINET."
2. 1) Remove the Front Cover Unit from the latches.  
2) Remove the 5 Screws (454) from front side, and remove the Display.

Fig. D3

### Replacement Note:

After replacing the Base Body Unit, be sure to perform "ADJUSTMENT of Projection Unit." Refer to "WHEN INSTALLING THE PROJECTION UNIT OR THE BASE BODY UNIT INTO THE UNIT AT THE USER'S LOCATION:."

## REMOVAL OF THE POWER P.C.B. FROM THE CABINET

1. Remove the Rear Cover Unit. Refer to Step 1 in "REMOVAL OF THE TV UNIT AND THE DIGITAL TUNER P.C.B. FROM THE CABINET."
2. 1) Open the Power P.C.B./Power PCB Mount Metal by removing the 6 Screws (402, 421).  
2) Disconnect Connectors CN1522, CN1514, CN1516, CN1520 (Thermal Fuse) and release from the clampers.  
3) Remove the Lamp Unit by turning the Knob from the front.
3. 1) Disconnect the Lamp Connector by removing the 2 Screws (451).

Fig. D4-1

### Reassembly Note for Lamp:

After installing the Lamp Unit, confirm that the Lamp Unit will not come out by pulling on the Knob.

2) Remove the Power P.C.B. by removing the 5 Screws (479) and release from the spacer.

Fig. D4-2

**CAUTION:**

High voltage exists on the Power P.C.B. While removing Power P.C.B., do not touch any parts on the board. Hold the edge of the board when removing it.

C1810:  
High voltage  
generated.  
(approx. 400 V)

## REMOVAL OF THE FRONT JACK/OPERATION P.C.B., THE SD CARD P.C.B., THE MAIN P.C.B., THE BASE P.C.B. FROM THE TV UNIT

1. Remove the TV Unit. Refer to Steps 1 ~ 4 in "REMOVAL OF THE TV UNIT AND THE DIGITAL TUNER P.C.B. FROM THE CABINET."
2. Remove the Rear Jack Holder by removing the screws and releasing Locking tab ("▽" mark).
3. Remove the Main P.C.B. and the Main PCB Mount Metal together by removing the screws ("○" mark) and the connector. Then remove the Main P.C.B. by removing the screws ("△" mark).
4. Remove the Base P.C.B. by removing the screws ("□" mark).

## REMOVAL OF THE SCREEN UNIT FROM THE DISPLAY

1. Remove the Display. Refer to Steps 1 ~ 2 in "REMOVAL OF THE BASE BODY UNIT."
2. Remove the Screen Unit by removing the 16 Screws (401).

See label on the 56 inch Screen Unit.

label		
Screen Unit	by TOPPAN	by KURARAY
<b>PT-56LCX66</b>	LSYK1871	LSYK1888
<b>PT-56LCX16-K</b>	LSYK1872	LSYK1889

Fig. D5-1

### Replacement Note for 56 inch Screen Unit:

Because there are two types of 56 inch Screen Unit, a label (T or K) is indicated on the Screen Unit.

When servicing a 56 inch Screen Unit, remove the Front Cover Unit and confirm the label on the unit. Then, order the correct parts according to the above chart.

#### (PT-56LCX66)

Screen Unit (LSYK1871) is compatible with the Screen Unit (LSYK1888) as a unit.

#### (PT-56LCX16/PT-56LCX16-K)

Screen Unit (LSYK1872) is compatible with the Screen Unit (LSYK1889) as a unit.

- Remove the 2 Screen Angle H Units and the 2 Screen Angle V Units by removing the 14 Screws (465), and remove the Fresnel Lens and the Lenticular Screen.

Fig. D5-2

**Replacement Note for all Screen Units:**

When replacing the Fresnel Lens and the Lenticular Screen, it is imperative that dust, etc., does not adhere between the Fresnel Lens and the Lenticular Screen. Due to this risk, it is strongly recommended to replace the Screen Unit as a unit.

**Replacement Note for 56 inch Screen Unit:**

Because there are two types of 56 inch Screen Units and individual parts contained in the Screen Unit are not compatible, a label (T or K) is indicated on the Screen Unit. When servicing individual parts of a 56 inch Screen Unit, remove the Front Cover Unit and confirm the label on the Screen Unit. Then, order the correct parts according to the above chart.

## REMOVAL OF THE MIRROR FROM THE BACK COVER

1. Remove the Screen Unit. Refer to Steps 1 ~ 2 in "REMOVAL OF THE SCREEN UNIT FROM THE DISPLAY."
  2. **(For 52 inch models)**
    - 1) Remove the 2 Mirror Holder H Units and the 2 Mirror Holder V Units by removing the 8 Screws (401).
    - 2) Remove the Mirror from the top by releasing the Back Cover slots.
- Note:** The Mirror is fragile. Handle with extreme care.

Fig. D6-1

### Reassembly Notes for Mirror:

#### Install the Mirror using the following procedures:

- 1) Hold the edge of the Mirror, and insert the Mirror from the top into the Back Cover slots carefully.  
When handling the Mirror, do not touch the Mirror surface.
- 2) Install the 2 Mirror Holder H Units and the 2 Mirror Holder V Units on the Mirror and tighten the 8 Screws (401).

(For 56/61 inch models)

- 1) Remove the 3 Mirror Holder H Units and the 2 Mirror Holder V Units by removing the 10 Screws (401).
- 2) Remove the Mirror from the top by releasing the Back Cover slots.

**Note:** The Mirror is fragile. Handle with extreme care.

Fig. D6-2

**Reassembly Notes for Mirror:**

**Install the Mirror using the following procedures:**

- 1) Hold the edge of the Mirror, and insert the Mirror from the top into the Back Cover slots carefully. When handling the Mirror, do not touch the Mirror surface.
- 2) Install the 3 Mirror Holder H Units and the 2 Mirror Holder V Units on the Mirror and tighten the 10 Screws (401).

## REMOVAL OF THE POWER SWITCH P.C.B. FROM THE CABINET

1. Remove the Rear Cover Unit. Refer to Step 1 in "REMOVAL OF THE TV UNIT AND THE DIGITAL TUNER P.C.B. FROM THE CABINET."
2. 1) Remove the 2 Screws (465) and disconnect Connector CN6801.  
2) Remove the Power Switch P.C.B. from the rear.

Fig. D7

## 9 Measurements and Adjustments

### 9.1. Adjustment Procedures 1

#### WHEN INSTALLING THE PROJECTION UNIT OR THE BASE BODY UNIT INTO THE UNIT AT THE USER'S LOCATION:

The following ADJUSTMENT of the Projection Unit must be performed.

a. Focus Adjustment

**Note:**

The Focus Adjustment is not normally necessary when reinstalling.

However, the Focus Adjustment should be performed when replacing the new Projection Unit or new Base Body Unit.

b. Mechanical Picture Position Adjustment

c. Electrical Picture Position Adjustment

**Adjustment Preparation:**

1. Install all parts except the Front Cover Unit  
Then, remove the Optical Cover by removing the Screw and 2 latch tabs.

(With Front Cover Unit and Optical Cover removed)

<Front View>

Fig. M1-1

**Note:**

When the rear cover is disassembled, the screen can be moved back and forth, which could affect the video display vertical position. This could also cause the vertical adjust to be at or near its limit.

Only try the picture position adjustment with the rear cover assembled!

2. Turn the power on.
3. Press and hold the VOLUME DOWN button on the unit and the RECALL key on the remote for more than 5 seconds in power on condition. "WORK MODE" will appear on the screen.

<Work Mode>

Fig. M1-2

4. Press the VCR key to go to VCR mode, then the RECALL key on the remote for more than 1 second. "FACTORY ADJUST" will appear on the screen.

<Factory Adjust mode>

Fig. M1-3

5. Press the TV key to return to TV mode, then press the CH UP/DOWN key on the remote to select "OTHER" on menu and press the OK key. "OTHER" menu will appear.

<Factory Adjust Mode>  
(OTHER menu 1/1)

Fig. M1-4

6. Press the VOLUME UP/DOWN key on the remote. (Focus screen will appear.)

<Focus Screen>

**To release this mode:**

1. After completing the ADJUSTMENT, press the CH UP/DOWN key on the remote to return to the OTHER menu.
2. Press RECALL key twice to return to Work Mode, and press and hold the VOLUME DOWN button on the unit and the RECALL key on the remote for more than 5 seconds.  
Or, turn off the power.
3. Install the Optical Cover with the Screw and the Front Cover Unit.

**a. Focus Adjustment**

- 1) Confirm that each of the pixels in the nine portions are clearly visible.

<Focus Screen>

- 2) If not, loosen the Knob on the Projection Lens until the Knob can be moved.

<Front View>

Fig. M1-6

- 3) Adjust the Knob by moving up or down so that each of the pixels in the nine portions is clearly visible to obtain the best focus.
- 4) Tighten the Knob.

**b. Mechanical Picture Position Adjustment (Tilt)**

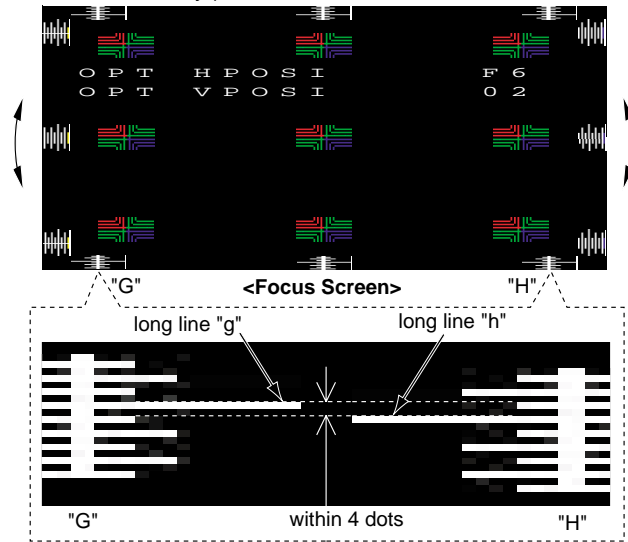

- 1) Loosen the 4 Screws on the Projection Unit.

<Front View>

Fig. M1-5

- 2) Adjust the Projection Lens by twisting so that the long line "g" and the long line "h" are within 4 dots. (The long line "g" and the long line "h" will be almost aligned horizontally.)

**Note:**

If the Projection Lens is twisted left, the Focus Screen twists left.

If the Projection Lens is twisted right, the Focus Screen twists right.

- 3) Tighten the 4 Screws while fixing the Projection Lens.

### c. Electrical Picture Position Adjustment

- 1) Adjust OPT HPOSI so that "C" is symmetrical to "D" by pressing the VOLUME UP/DOWN key on the remote to change the value.
- 2) Press the CH UP/DOWN key on the remote to return to the OTHER menu.
- 3) Select OPT VPOSI by pressing CH UP/DOWN key on the remote.
- 4) Adjust OPT VPOSI so that "A" is symmetrical to "B" by pressing the VOLUME UP/DOWN key on the remote to change the value.

<Focus Screen>

- 5) Confirm that all "A", "B", "C", "D", "E", "F", "G", "H", "I", "J", "K", "L" are each almost symmetrical.
- 6) If not, adjust the "OPT HPOSI" and "OPT VPOSI" (repeat steps 1-6) until the picture is in the correct position.
- 7) Press the CH UP/DOWN key on the remote to return to the OTHER menu.

# 10 Maintenance

## 10.1. Cleaning Methods

### THE SCREEN UNIT AND THE MIRROR

#### - THE SCREEN UNIT (Lenticular Screen, Fresnel Lens)

It is strongly recommended that the Lenticular Screen surface (outside) and the Fresnel Lens surface (inside) should be wiped gently with a clean, soft, dry cloth to remove the dirt.

#### Note:

1. If the dirt cannot be removed by wiping with a clean, soft, dry cloth, use a clean, soft, dry cloth moistened with diluted neutral pH liquid cleanser or a lens cleaner (usually containing a small amount of ethyl alcohol) and wipe lightly. Take care not to leave any streaks. Do not use cleaning materials containing methyl alcohol, acetone, or dichloromethane.
2. Use an air blower to clean the inner surface of the Lenticular Screen and the outer surface of the Fresnel Lens (the surfaces that are next to each other). These surfaces must not be wiped with a cloth.

#### - THE MIRROR

Remove any dirt with an air blower or wipe with a clean, soft, dry cloth. If wiped too forcefully, the surface of the Mirror can be damaged. If wiping with a clean, dry cloth does not remove the dirt, the Mirror must be replaced.

Fig. 6-1

### THE LAMP

Gently wipe the surface of the glass of the Lamp with cleaning paper or soft cloth.

Fig. 6-2

### THE FILTER ON THE PROJECTION UNIT

#### CAUTION:

Operating with torn or damaged Air Filter may cause damage to the Projection unit.

Remove the Projection Unit from rear. Then, clean the filters on the Projection Unit. Gently remove any accumulated dust from filter with a vacuum cleaner; use extreme care so as not to damage or tear the filters.

Fig. 6-3

### THE PROJECTION LENS

Use lens cleaning paper and cleaner available at your local camera shop, etc. Dampen the cleaning paper with cleaner and gently wipe the surface of the lens from the center outward to remove dust.

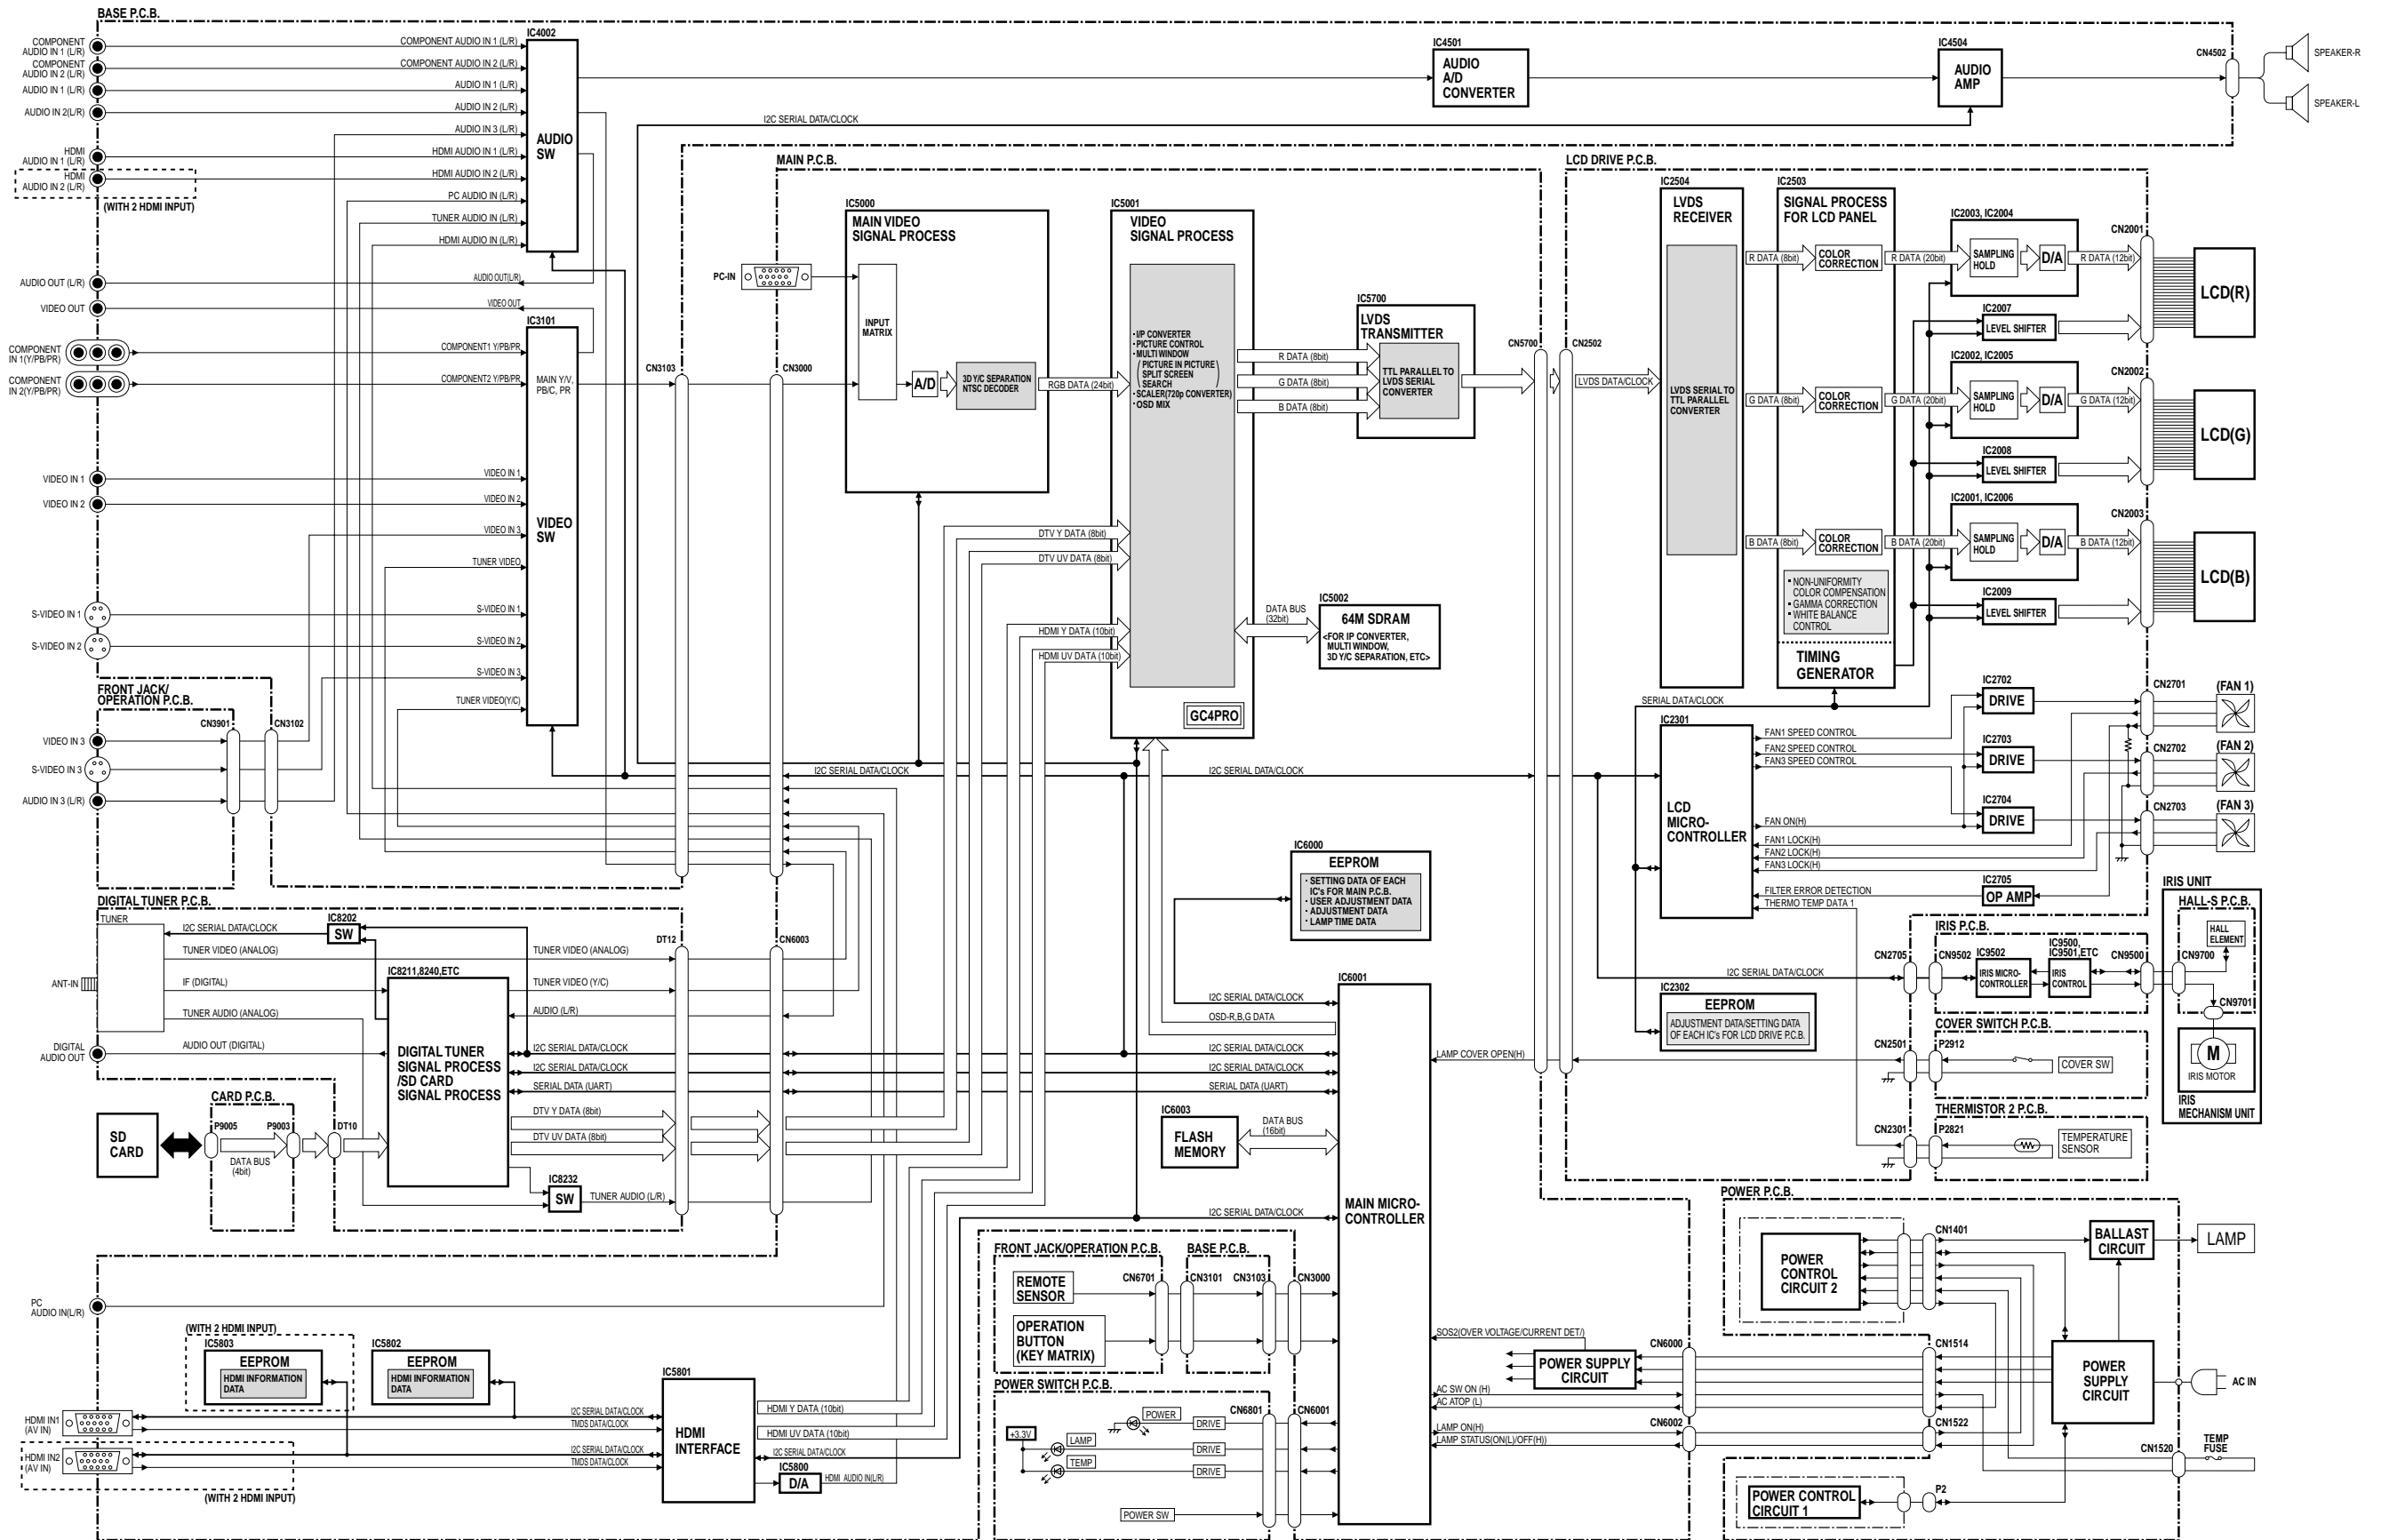

Fig. 6-4

## 12.1. SCHEMATIC DIAGRAM AND CIRCUIT BOARD LAYOUT NOTES

### 1. Important safety notice

Components identified by the sign  have special characteristics important for safety. When replacing any of these components. Use only the specified parts.

### 2. Do not use the part number shown on this drawing for ordering.

The correct part number and part value is shown in the parts list, and may be slightly different or amended since this drawing was prepared.

### 3. Use only original replacement parts:

To maintain original function and reliability of repaired units, use only original replacement parts which are listed with their part numbers in the parts list section of the service manual.

### 4. Parts different in shape or size may be used.

However, only interchangeable parts will be supplied as service replacement parts.

### 5. Test point information

● : Test point with a jumper wire across a hole in P.C.B.

○ : Test point with no test pin.

### Schematic Diagram Notes

#### 1. Indication for Zener Voltage of Zener Diodes

The Zener Voltage of Zener Diodes are indicated as such on Schematic Diagrams.

Example:  
(6.2V).....Zener Voltage

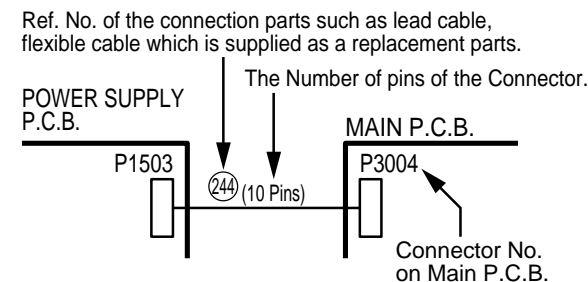

#### 2. How to identify Connectors

Each connector is labeled with a Connector No. and Pin No. Indicating what it is connected to, in other words, its counter part.

Use the interconnection schematic diagram to find the connection between associated connectors.

Example:

The connections between P.C.B.s are shown below.

### 3. Parts marked "PT" are not used in any models included in this service model.

### 4. Jumper wires are used for WA10, WA5 etc and these are not supplied as replacement parts.

### Circuit Board Layout Note

Circuit Board Layout shows components installed for various models.

For proper parts content for the model you are servicing, please refer to the schematic diagram and parts list.

NOTE:

Circuit Board Layout includes components which are not used.

## 7 PACKING PARTS AND ACCESSORIES SECTION

# 15 Replacement Parts List

BEFORE REPLACING PARTS, READ THE FOLLOWING:

## 15.1. REPLACEMENT NOTES

### 15.1.1. General Notes

- Use only original replacement parts:  
To maintain original function and reliability of repaired units, use only original replacement parts which are listed with their part numbers in the parts list.
- IMPORTANT SAFETY NOTICE**  
Components identified by the sign  $\triangle$  have special characteristics important for safety. When replacing any of these components, use only the specified parts.
- SPECIAL NOTE**  
All integrated circuits and many other semiconductor devices are electrostatically sensitive and therefore require the special handling techniques described under the "ELECTROSTATICALLY SENSITIVE (ES) DEVICES" section of this service manual.
- Parts with no Ref. No. in "EXPLODED VIEWS" are not supplied. And some Ref. No. will be skipped. Be sure to make your orders of replacement parts according to the parts list.
- Parts different in shape or size may be used. However, only interchangeable parts will be supplied as service replacement parts.
- Definition of Parts supplier:
  - Parts with mark "PSEC" in the Remarks column are supplied from PSEC.
  - Parts without mark in the Remarks column are supplied from PASC-NPC.
- Item numbers with capital letter E (Example: E10, E20,...) in the Ref. No. column are shown in the exploded views.
- Parts whose Ref. Nos. are the same are interchangeable as replacement parts. Any of these parts may be ordered and used as a replacement part.

### 15.1.2. Main Parts Replacement Notes

- Section No. of parts shown in Exploded Views are indicated in the Remarks column.
- Abbreviation  
RTL: Retention Time Limited  
This indicates that the retention time is limited for this item. After the discontinuation of this item in production, it will no longer be available.
- After replacing the Projection Unit (Ref. No. 21) or the Base Body Unit (Ref. No. 40), be sure to perform "ADJUSTMENT of the Projection Unit." Refer to "WHEN REINSTALLING THE PROJECTION UNIT OR BASE BODY UNIT INTO THE UNIT AT THE USER'S LOCATION"; in Adjustment Procedures 1.
- The Infrared Remote Control Unit (Ref. No. 109) replacement part is available as a complete assembly unit only. Do not try to disassemble the Infrared Remote Control Unit.

### 15.1.3. Electrical Replacement Notes

- Unless otherwise specified;  
All resistors are in  $\Omega$ , K = 1,000  $\Omega$ , M = 1,000 k $\Omega$ .
- Abbreviation
 

RTL:	Retention Time Limited
	This indicates that the retention time is limited for this item. After the discontinuation of this item in production, it will no longer be available.
NR:	Non Repairable Board Ass'y
MGF CHIP:	Metal Glaze Film Chip
C CHIP:	Ceramic Chip
COMPLX CMP:	Complex Component
W FLMPRF:	Wirewound Flameproof
C.B.A.:	Circuit Board Assembly
P.C.B.:	Printed Circuit Board
E.S.D.:	Electrostatically Sensitive Devices
- When replacing 0  $\Omega$  resistor, a wire can be substituted for it.
